

*Follow instructions on the care label & read on for additional tips!*

## ★ THE FIRST WASH is the most important!

**Always follow your care label and be sure to wash the garment before it is worn.**

It is very important to wash your garment before it is worn. The first wash helps in releasing any loose dye that may still be on the fabric. Eliminating these loose dyes will prevent color transfer and color fading. When you wash your garments **BEFORE** wearing it helps set the color by removing any excess dye, also preventing transfer of color. When a garment is worn before the first wash, perspiration or any other source of moisture can cause the colors to transfer.

## ★ Avoid contact with Aerosols (hairspray, deodorant), Glitter and Lotions.

When an Aerosol product comes in contact with Rhinestones or Threadless Sequins, chemicals in the spray cause the adhesive to become brittle and eventually they will fall off.

## ★ Stain Treatment

- A stain should be treated as soon as possible.
- You can soak the garment in water to help loosen the stain.
- Follow the instructions on the stain remover's label, then wash the garment according to the garment care label.

If you run into stains such as makeup, grass stains, food, etc. we recommend using a reputable stain remover, such as Oxi-Clean Stain Removal Spray, to help remove the stain. If a follow-up treatment is needed, do so while the garment is still wet. Repeat as necessary.

## ★ Color Transfer

In the unlikely event your garment begins to fade or shows color transfer, please rinse it again before it dries. If this does not help, try using a reputable stain remover, such as Oxi-Clean Stain Removal Spray. Follow the instructions on the stain remover's label and treat the garment according to the garment care label. If you continue to have issues with the garment, please contact your sales representative.

## ★ Specialty fabrics are more

**delicate** due to their unique fabric content and may experience color transfer if proper care instructions are not followed. These fabrics may have potential to fade or rub off with normal wear and tear, especially in high-contact areas.

These include any fabrics that are metallic fabrics, foil fabrics, sequin fabrics, lace, holographic foil fabrics, foil dot fabrics and metallic and satin twill lettering.

### CARE LABEL

Check your garment care label to see if your garment can be machine washed or if it must be hand washed.

### SHOE CARE:

For minor shoe stains, place items in a bucket of luke warm water with Oxy Clean or baking soda, and use a cloth or soft bristle brush to clean.
